Applicants' remarks and amendments, filed on August 12, 2008, have been carefully considered. No claims have been canceled; claims 1-9 and 11-38 remain pending in this application.

#### *Election/Restrictions*

1. Claims 26-38 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected process for the epoxidation of an olefin (claims 26-37), and to a non-elected process for producing a 1,2-diol, 1,2-diol ether, or an alkanolamine (claim 38), there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on December 22, 2004.

Claims 1-9 and 11-25 remain under consideration by the Examiner.

#### *Withdrawn Rejections*

The 112(2) rejection of claims 11 and 12 stated in the previous Office Action has been withdrawn in view of Applicants' amendments to these claims.

The 103(a) rejection of claims 1-9 and 11-25 as being unpatentable over Lauritzen (U. S. Patent No. 4,761,394, Applicants' previously submitted art), stated in the previous Office Action, has been withdrawn in view of Applicants' persuasive arguments traversing this rejection.

***Allowable Subject Matter***

2. This application is in condition for allowance except for the presence of claims 26-38 directed to inventions that are non-elected without traverse. Accordingly, claims 26-38 have been cancelled.
3. Claims 1-9 and 11-25 allowed.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:
5. The prior art of record does not teach or suggest the claimed method for improving the selectivity of a supported highly selective epoxidation catalyst comprising silver in a quantity of at most 0.17 g per m<sup>2</sup> surface area of the support and further comprising rhenium or a compound thereof, said method comprising contacting the catalyst (or a precursor of the catalyst comprising silver in cationic form) with a feed comprising oxygen at a catalyst temperature above 250°C for a duration of at least 1 hour and up to 150 hours, and subsequently decreasing the catalyst temperature to a value of at most 250°C.

The prior art does not teach or suggest the claimed temperature treatment limitations, which result in a catalyst exhibiting an unexpected improvement in selectivity when employed in an epoxidation process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
